

Programme Overview

MHE Management for Managers

People
Development
Pathway

Overview

Many Managers have the resource of Materials Handling Equipment within their responsibility. However, unless they have been trained to operate these pieces of equipment, their knowledge of them is limited. Poor control of MHE operations and maintenance can lead to expensive errors, resulting in damage, injury or just a shorter operational life.

Objectives

- To provide operational and non-operational managers with the understanding of MHE to enable them to manage these resources effectively
- To understand the available equipment
- To be able to select and effectively operate the various power choices of Diesel, LPG and Electric Motive Power (Batteries)
- To understand the disciplines required to ensure safe operations
- To understand the importance of good regular maintenance procedures

Who Should Attend?

All Managers, Supervisors and Team Leaders with responsibility for the operation of Materials Handling Equipment. The course aims to take the understanding of the operation and care of MHE further than just operating and looks into the options available for fuel selection, good operational practise, safety and maintenance.

Course Content:

- MHE options available for different activities and their component parts
- The choice of Pallets for unit load handling, load centres for both Short and Long Side Handling
- Understanding the vehicle 'Plate' and Stability Issues
- The different options of power and it's safe operation, maintenance and storage
- Health and Safety issues and good Operational Management

Duration

The course will run over 1 day and will enable the delegates to review their own operations as well as consider future improvements. They will receive instruction, become involved in discussions and have the opportunity to review practical MHE operations.
